Profile

Second-year B.Tech student in Electronics Engineering (VLSI Design and Technology) at VIT Chennai, with a strong interest in VLSI design and fabrication. My studies have provided me with a solid foundation in electronics and an early exposure to VLSI technologies. I am eager to further develop my skills and knowledge in this field to contribute to advancements in semiconductor design and technology.

Projects and Certifications

Hamming Machine

As part of a Digital System Design using Verilog HDL project, I developed a Hamming machine for error correction, implementing Hamming codes to detect and correct single-bit errors in data transmission. By coding the system to calculate and append error-checking bits, I enabled automatic detection and correction, ensuring reliable data integrity. The Hamming machine leverages combinatorial logic and matrix operations, making it an efficient solution for error correction in digital circuits, such as RAM, ROM, and registers.

Certificate on Semiconductor Technology and Microfabrication

As part of a IISC Bangalore conference, I was able to get a generic idea on the fabrication of semiconductor devices. By following this up with a visit to CeNSE, IISC Bangalore, I was able to get an overview on the production of semiconductor devices .

Education

JULY 2027
(expected)

B.Tech Electronics Engineering(VLSI Design and Technology) , VIT Chennai

Key Skills

- Verilog
- Digital Circuit Design
- Programming in Python
- Programming in Java
- Effective Communication

Extra Curricular

Co-Founder (10/2024 – Current)

ICSD, VIT Chennai

- Currently working on developing a club for students interested in VLSI design
